

SCALE 1"=10'

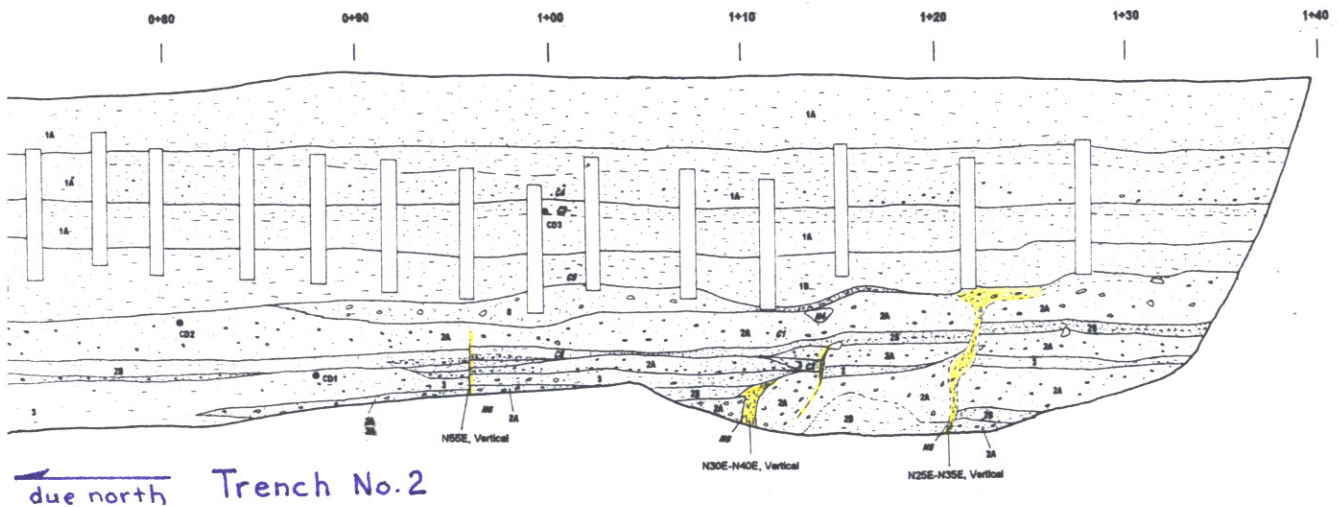

Figure 2 (FER-219, supplement 2) – portions of trench logs by AGS (1997) showing vertical separations: down to the south in the northern trench (Trench No.1) and down to the north in the southern trench (Trench No.2). Note the downdropped block in Trench No.1 between stations 0+90 and 1+20, suggesting extension. Sand in-filling some fractures is suggestive of liquefaction effects.
